

Abstract

A folding bed with arms that is convenient to carry and is comfortable and safe for use in households, outdoors, in courtyards, in parks, and at beaches. The folding bed has a left-right symmetrical structure that includes a bed body support, arms, and a bed plane. The bed body support includes a front support and a rear support. The front support includes a foot-rest rod, a front leg tube, a front support rod, a rear support rod, a connection rod, and a front crossed rod. The rear support includes a seating frame rod, a back-rest tube, a middle crossed rod, and a rear crossed rod. The bed body support structure has high strength because the bed body foot-rest rod, the front support rod, rear support rod, and connection rod form a quadrangular structure, and the rear support uses a crossed support and has folding arms.
